

Digital Well Database Modules

Norwegian Continental Shelf

A comprehensive overview and analysing tool for wells is a basis for the HC exploration in mature basins, like on the Norwegian continental shelf (NCS). AGGS is offering **GIS-based databases** as supplementary exploration tool to public databases:

Finds & Shows

- ✓ Regionally and stratigraphic overview of HC finds
- ✓ All NCS Exploration Wells (~1850 wells)
- ✓ Plus 2450 UKCS wells along the boarder

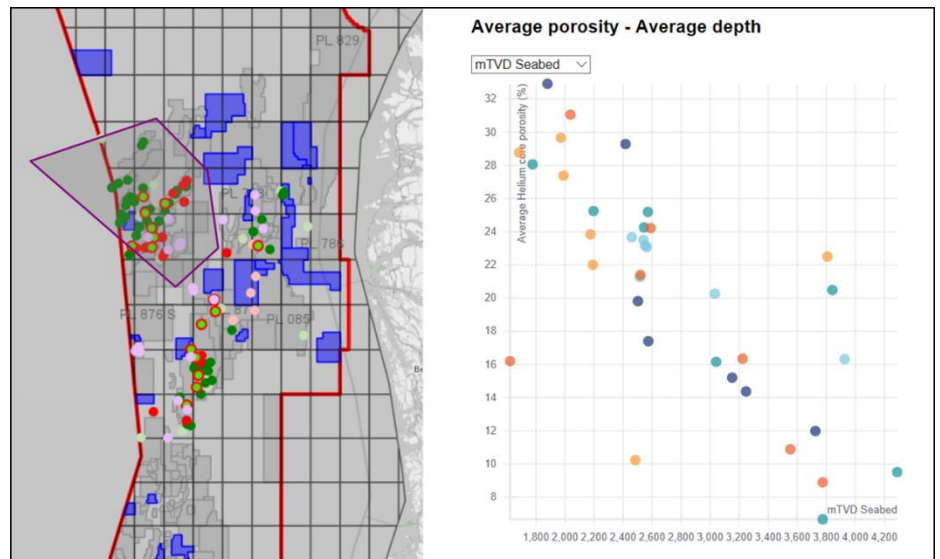

Porosity & Permeability Data

- ✓ 1020 cored wells (~300 000 data points)
- ✓ 709 wells from North Sea
- 213 wells from Norwegian Sea
- 99 wells from Barents Sea

DST Analyses

- ✓ 419 wells – 650 test observations

Check Shots

The databases are offered as single standing modules or as a complete package. You will get access to a web-based GIS application (Norkart) or we can install the databases on your in-house GIS system.

The databases are carefully qc'ed and will be biannually updated.
